

FRICKE FILLING SYSTEM

AFS 20

Automated filling for maximum efficiency

With the AFS 20 below-level filling system, foaming or explosive liquids are filled precisely and efficiently into various containers directly on the pallet - without any heavy lifting.

Thanks to automatic bunghole detection, the system automatically positions the filling valve above each container opening - ideal for pallets with different types of containers.

Products:	cleaning agents and solvents, chemical liquids, mineral oils, glazes
Containers:	canisters, drums, IBCs directly on the pallet
Below-level filling:	for foaming or explosive liquids - filling below the level
Weight ranges:	10 kg - 600 kg, 20 kg - 1,500 kg, 50 kg - 3,000 kg

Advantages

- **Fast & flexible:** automatic bunghole detection and valve positioning
- **Efficient:** containers are filled directly on the pallet - eliminating the need for separate palletizing systems
- **Intelligent:** storage and recall of individual filling programs for different containers and products

Options:	single or dual cell design
	automatic bunghole detection via camera or "teach-in" system
	explosion protection in acc. with ATEX Directive 2014/34/EU
